

Kotka-Hamina Region technology companies and Cursor join forces at the Subcontracting Trade Fair 2016 in stand C549

The joint stand **C549** in Hall C strongly promotes the region's great competence in the metal industry and industrial services, maps the new growth and development opportunities in the field and provides information about the Kotka-Hamina Region.

Our presence is supported by Digital renewal of manufacturing project which aims at developing flexibility and efficiency as a part of the supply chain in the technology industry companies. In practice, this means intensification of the processes, faster change management and better overall control with digitalisation and smart logistics. The project brings new knowledge about digital applications in production or products for the participating companies. The central benefit for them is their strengthened ability to evaluate digitalization possibilities in their own companies. Its piloting activities are the main instruments to gain new knowledge to the companies. New methods and systems require also training for the personnel. One target sector is the maintenance business and spare parts manufacturing.

CURSOR OY, the Kotka-Hamina Regional Development Company, provides guidance in matters connected to entrepreneurship and business operations. Cursor develops the regional competence areas and builds new opportunities for success in co-operation with companies. Cursor maintains a register of local companies and the available business premises and industrial lots. Cursor strives to support and strengthen the well-being and business competitiveness of the region.

The trade fair stand will feature Cursor as well as the following companies that specialise in metal industry subcontracting, custom orders and industrial services:

HNR-Konopaja Oy

Juhani Haavisto Oy

Karhula Foundry Ltd

Kotkan Levytyö Oy

Novela 3D Oy

Suptek Oy
